Chapter 1

Welcome to CampusTrack

1.1 What is CampusTrack?

CampusTrack is a complete software system for schools and colleges. It connects four groups of people:

- **Parents** – see, on their own phone, when their child arrives at school and leaves school, which rooms and classes the child attended, the full semester timetable, and progress reports written by teachers. Parents can also send feedback to the school and receive replies.
- **Students** – see their timetable, download assignments and notes by scanning a QR code, and upload their projects, activities and theses from their phone.
- **Teachers** – use a website to write progress updates about students, publish assignments and notes, answer parent feedback, and review student uploads.
- **Administrators** – manage everything: classes, sections, rooms, RFID readers, timetables and user accounts. Classes and sections are *modular*: the admin can add or remove them at any time.

1.2 How does the attendance work? (in plain words)

Every student carries a normal-looking **ID card**. Inside the card there is a tiny **RFID chip** – like the chip in a contactless bus card. The student does not need to touch anything or stand in a queue.

At the **school gate** and in **every room** (classrooms, laboratories, library, discussion rooms, auditorium) there are small **antennas** fixed above the door. When a student simply walks through, the antennas notice the card – automatically, from a distance.

1.2.1 How the system knows IN from OUT

The trick is the *order* in which the antennas see the card:

- Walking **in**, the card passes antenna 1 first, then 2, then 3 (at the gate).
- Walking **out**, the same antennas see the card in the reverse order: 3, then 2, then 1.

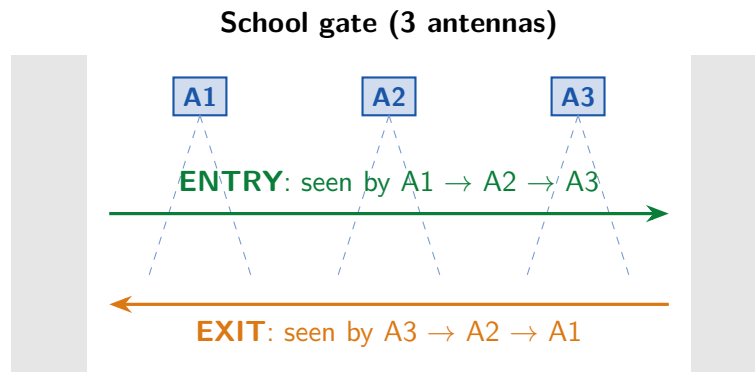

Figure 1.1: The gate has three antennas. The order in which they detect the ID card tells the system whether the student walked in or out.

Rooms work exactly the same way, only with **two** antennas: antenna 1 then antenna 2 means the student **entered** the room; antenna 2 then antenna 1 means the student **left** the room.

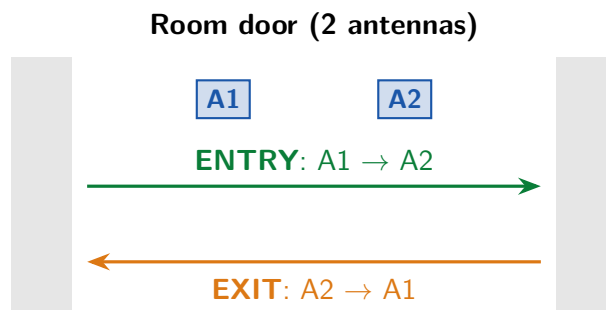

Figure 1.2: Every classroom, laboratory, library, discussion room and auditorium door has two antennas using the same idea.

1.3 What happens after a student is detected?

1. The moment a student walks through the **gate**, the parent's phone receives a notification: "*Ali Khan entered school at 07:58*" (and the same when the student leaves).
2. Every room the student enters during the day is silently recorded.
3. Every evening (at 6:00 pm by default) the parent receives a **daily summary**: arrival time, departure time, rooms and classes attended, and any teacher remarks of the day.
4. Every Friday the parent receives a **weekly summary** of the whole week.

1.4 The parts of the system

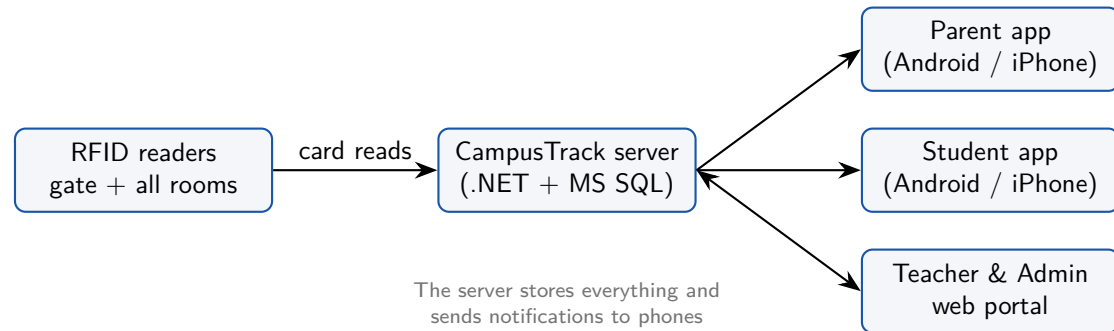

Figure 1.3: How the pieces connect. The readers watch the doors, the server keeps the records, and each person sees their own portal.

Note: Nobody needs to understand the technology to use CampusTrack. Parents and students only install one app and log in. Teachers and admins only open a website.

Chapter 2

Getting started

2.1 Who uses what

You are a...	You use...	Where
Parent	CampusTrack mobile app	your own phone
Student	CampusTrack mobile app	your own phone
Teacher	Teacher & Admin web portal	any browser
Admin	Teacher & Admin web portal	any browser

Table 2.1: One mobile app serves both parents and students – the app shows the right portal automatically after login.

2.2 Your username and password

You do **not** register yourself. The school office (the administrator) creates an account for every parent, student and teacher and hands over the username and password. If you forget your password, contact the school office – they can set a new one.

2.3 Installing the mobile app (parents and students)

1. Install **CampusTrack** from the Google Play Store (Android) or the App Store (iPhone) – or from the link the school gives you.
2. Open the app. You will see the sign-in screen.
3. Type the username and password the school gave you and tap **Sign in**.
4. When the phone asks “*Allow notifications?*” tap **Allow** – otherwise you will not receive gate alerts and daily summaries.

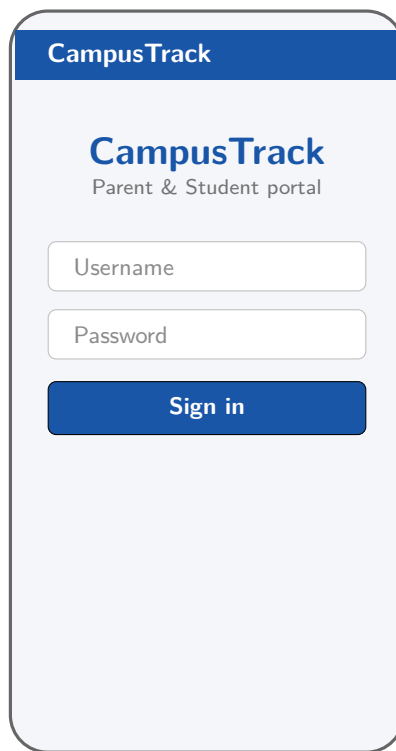

Figure 2.1: The sign-in screen of the mobile app (illustration).

2.4 Opening the web portal (teachers and admins)

1. Open any browser (Chrome, Edge, Firefox).
2. Go to the school's CampusTrack address, for example
`https://campustrack.yourschool.edu`
3. Sign in with your teacher or admin username.

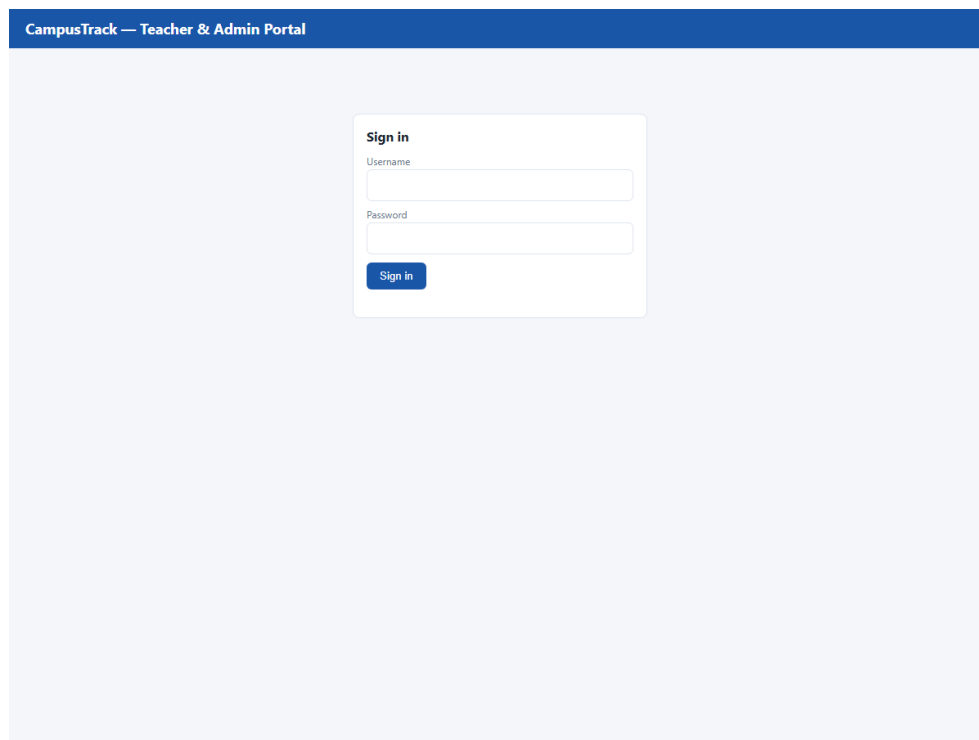

Figure 2.2: The web portal sign-in page (actual screenshot).

Note: The web portal is only for teachers and administrators. If a parent or student signs in there, the portal politely refuses and points them to the mobile app.

Chapter 3

Parent Portal (mobile app)

After signing in, a parent sees five buttons at the bottom of the screen:

Attendance Schedule Activity Feedback Alerts

If you have more than one child in the school, a small selector at the top of the screen lets you switch between children – everything on the screen then shows that child’s information.

3.1 Attendance – was my child at school?

The **Attendance** tab has two views, switchable at the top:

3.1.1 Daily view

One line per day: a green tick if the child was present, the **arrival time** at the gate and the **departure time**.

3.1.2 Movements view

The full trail of the day, recorded automatically by the room antennas: entered Room 101 at 08:02, left at 08:59, entered the Library at 10:15, and so on. Nothing needs to be typed by anyone – walking through a door is enough.

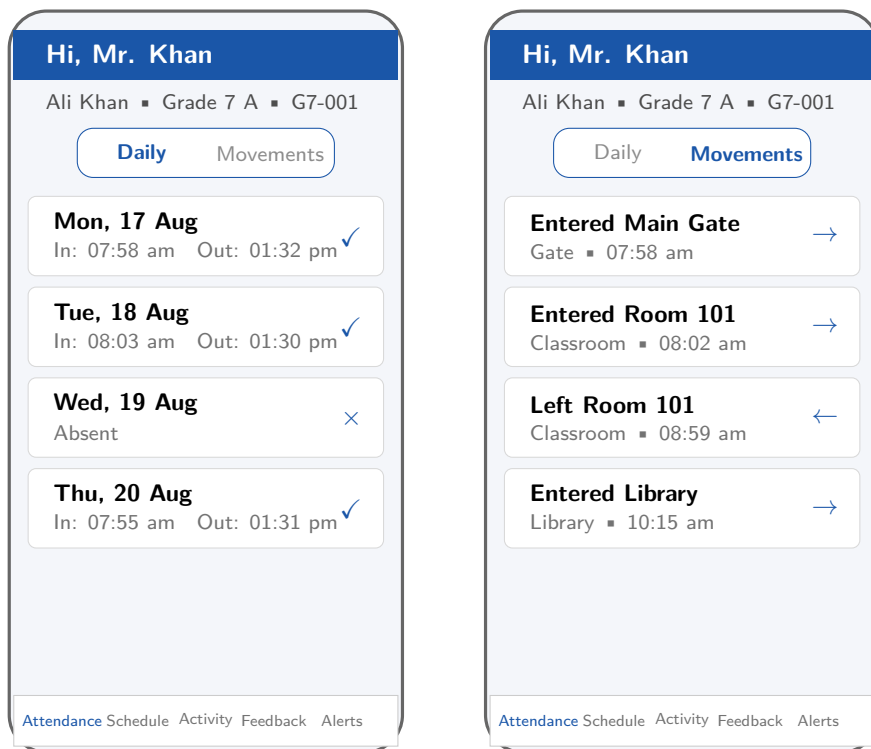

Figure 3.1: Attendance tab: the Daily view (left) and the room-by-room Movements view (right). Illustrations of the app screens.

Tip: Pull the list downwards with your finger to refresh it.

3.2 Schedule – the full semester timetable

Tap **Schedule** to see your child's timetable for the whole semester, day by day: subject, time, teacher and room. Whenever the school updates the timetable, the app always shows the latest version – no paper needed.

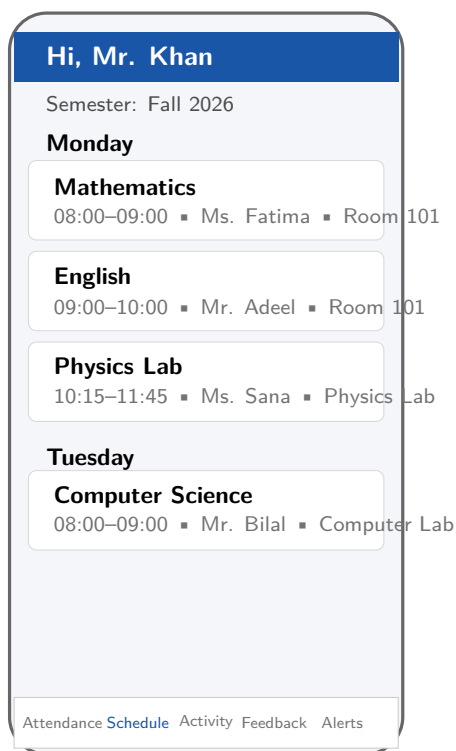

Figure 3.2: Schedule tab: the whole semester, grouped by day (illustration).

3.3 Activity – what teachers say about my child

Tap **Activity** to read every report a teacher has written about your child: test results, homework status, behaviour notes, sports achievements. Each report shows the category, the date, the teacher's name, the remarks and (when given) a grade.

You do not have to keep checking: whenever a teacher writes a new report, your phone receives a notification immediately.

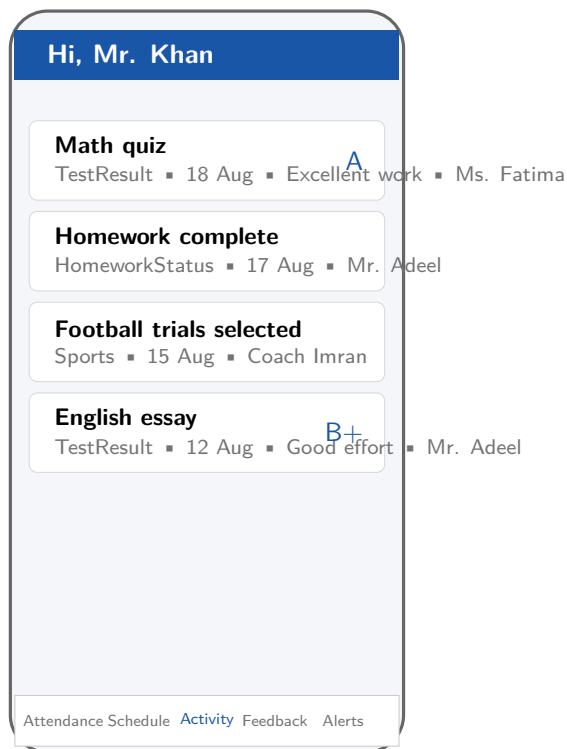

Figure 3.3: Activity tab: all teacher reports in one place (illustration).

3.4 Feedback – talk to the school

Tap **Feedback** to send a message to the school in one of the fixed columns (categories):

Teaching • Homework • Facilities • Transport • Discipline • Suggestion • Complaint

1. Choose which child the feedback is about (if you have several).
2. Choose the category from the list.
3. Type your message and tap **Submit**.

Below the form you can see all your earlier messages, their status (Open / Replied / Closed) and the school's written reply. When the school replies, you also get a phone notification.

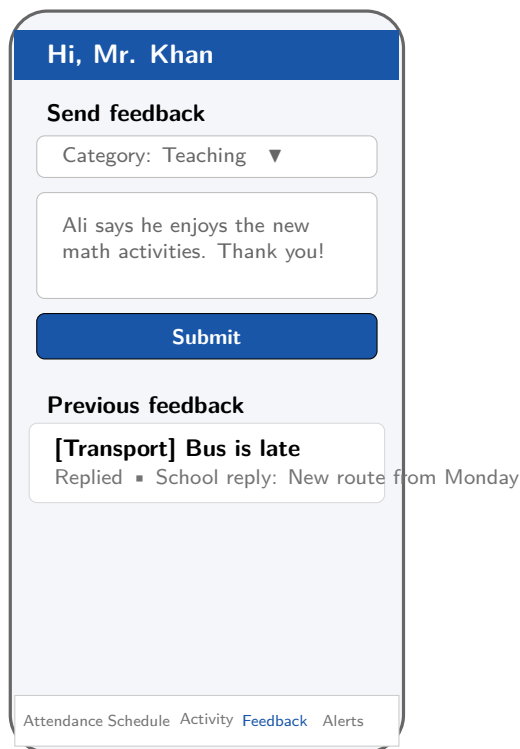

Figure 3.4: Feedback tab: fixed categories, your message, and the school’s replies below (illustration).

3.5 Alerts – every notification in one list

Tap **Alerts** to see everything the school has sent you:

- **Gate alerts** – “Ali Khan entered school at 07:58” the moment it happens;
- **Daily summary** – every evening: arrival, departure, rooms attended, teacher updates of the day;
- **Weekly summary** – every Friday, the whole week at a glance;
- **Activity alerts** – a teacher wrote a new report;
- **Feedback replies** – the school answered your message.

Unread notifications are shown in bold; tap one to mark it as read.

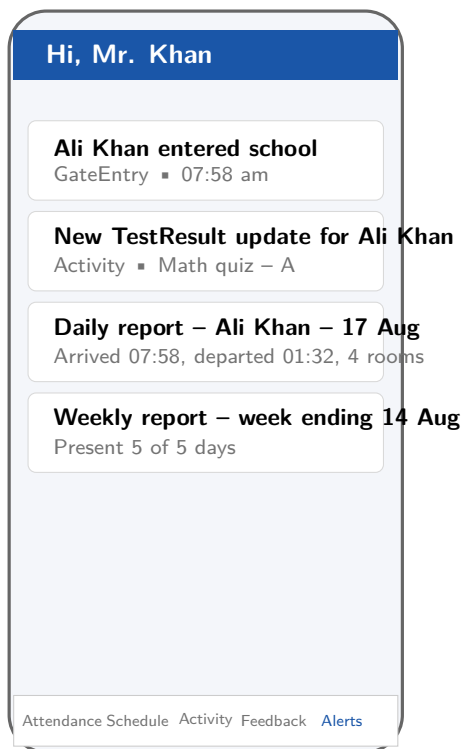

Figure 3.5: Alerts tab: gate events, daily and weekly summaries, teacher updates and replies (illustration).

Chapter 4

Student Portal (mobile app)

Students sign in to the *same* app as parents, with their own username. The app recognises the student account and shows four buttons at the bottom:

Schedule Assignments My work Alerts

4.1 Schedule – my timetable

Exactly like the parent view: the full semester timetable, day by day, with subject, time, teacher and room. Check it every morning to know where to go.

4.2 Assignments – download assignments and notes

The **Assignments** tab lists every assignment and every notes file your teachers have published for your section, newest first. Each row shows the title, the teacher, and the due date (for assignments).

There are **two ways to get the file**:

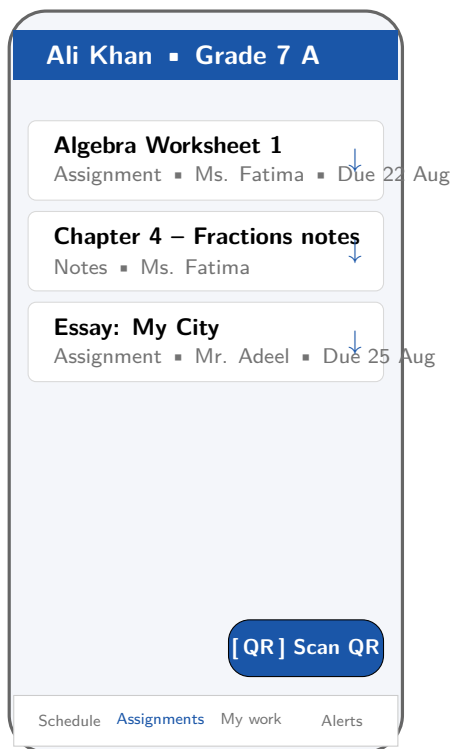

4.2.1 Way 1: tap the download button

Simply tap the download icon on the row – the file opens on your phone.

4.2.2 Way 2: scan the QR code (even faster in class)

When a teacher hands out an assignment, the printout (or the projector screen) carries a small square **QR code**.

1. Tap the round **Scan QR** button at the bottom right.
2. Point the camera at the QR code.
3. The file downloads immediately – nothing to type.

A real CampusTrack assignment QR code generated by the system. Scanning it with the app downloads the file “Algebra Worksheet 1”.

Figure 4.1: Left: the Assignments tab with the Scan QR button (illustration). Right: an actual QR code produced by the software.

Note: The app only accepts CampusTrack QR codes. If you scan something else – a shop QR, a random poster – the app politely says it is not an assignment code.

4.3 My work – upload projects, activities and theses

The **My work** tab is where you hand in your work from your phone:

1. Tap the + button.
2. Choose the type: **Project**, **Activity** or **Thesis**.
3. Type a title (and a short description if you like).
4. Tap **Choose file** and pick the document, photo or PDF from your phone.
5. Tap **Upload**.

Your upload then appears in the list with its status:

Submitted → the teacher has not looked yet
Approved / Rejected → the teacher reviewed it – any remarks appear under the title

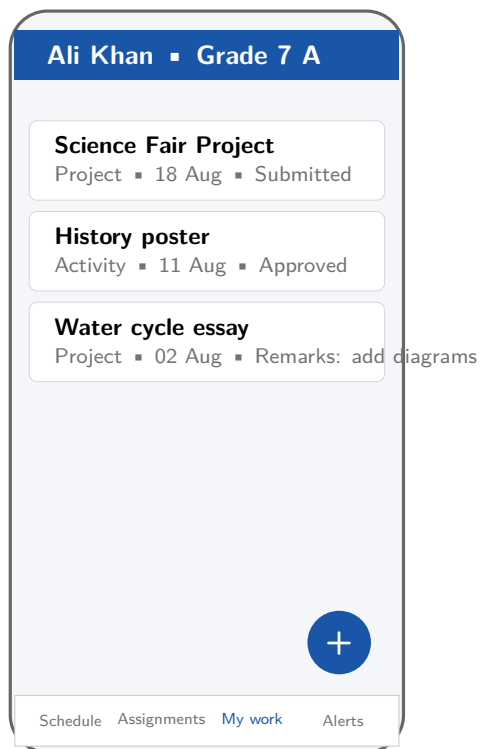

Figure 4.2: My work tab: upload with the + button and watch the review status (illustration).

4.4 Alerts

The same notification list as parents have – students receive general school announcements and messages meant for them.

Tip: Your attendance is recorded automatically by your ID card – keep the card with you all day, and do not lend it to anyone.

Chapter 5

Teacher Portal (web)

Teachers open the CampusTrack website in any browser and sign in with their teacher username. The portal shows five tabs:

**Student progress • Assignments & notes • Parent feedback • Student uploads •
Timetable**

All screenshots in this chapter are taken from the live system.

5.1 Student progress – write a report about a student

This is where you tell parents how their child is doing. Every report you save is **instantly sent to the parent’s phone**.

1. Choose the **Section** (for example *Grade 7 A*) – the **Student** list fills automatically.
2. Choose the student and the **Date**.
3. Choose a **Category**: Academic, Behaviour, Sports, HomeworkStatus, TestResult or Other.
4. Type a short **Title** (e.g. “Math quiz result”), an optional **Grade** (e.g. “A” or “87%”) and your **Remarks**.
5. Click **Save & notify parent**. Done – the parent is notified immediately.

5.2 Assignments & notes – publish files with a QR code

Upload an assignment or notes file once, and every student of the section can download it – from the list in their app, or by scanning the QR code the portal gives you.

1. Choose the **Section** and the **Type** (Assignment or Notes), and a **Due date** if relevant.
2. Type the **Title** and a short **Description**.
3. Click **Choose file**, pick your document, then click **Upload**.
4. The portal immediately shows a **QR code**. Print it on the handout or project it on the class screen – students scan it and receive the file instantly.

5.3 Parent feedback – read and reply

Every message a parent sends from the app lands in this inbox, with its category, the parent’s and student’s names, and the current status.

1. Read the message in the table.
2. Click **Reply...**, type your answer, press OK.
3. The parent receives your reply as a phone notification, and the status changes to *Replied*.

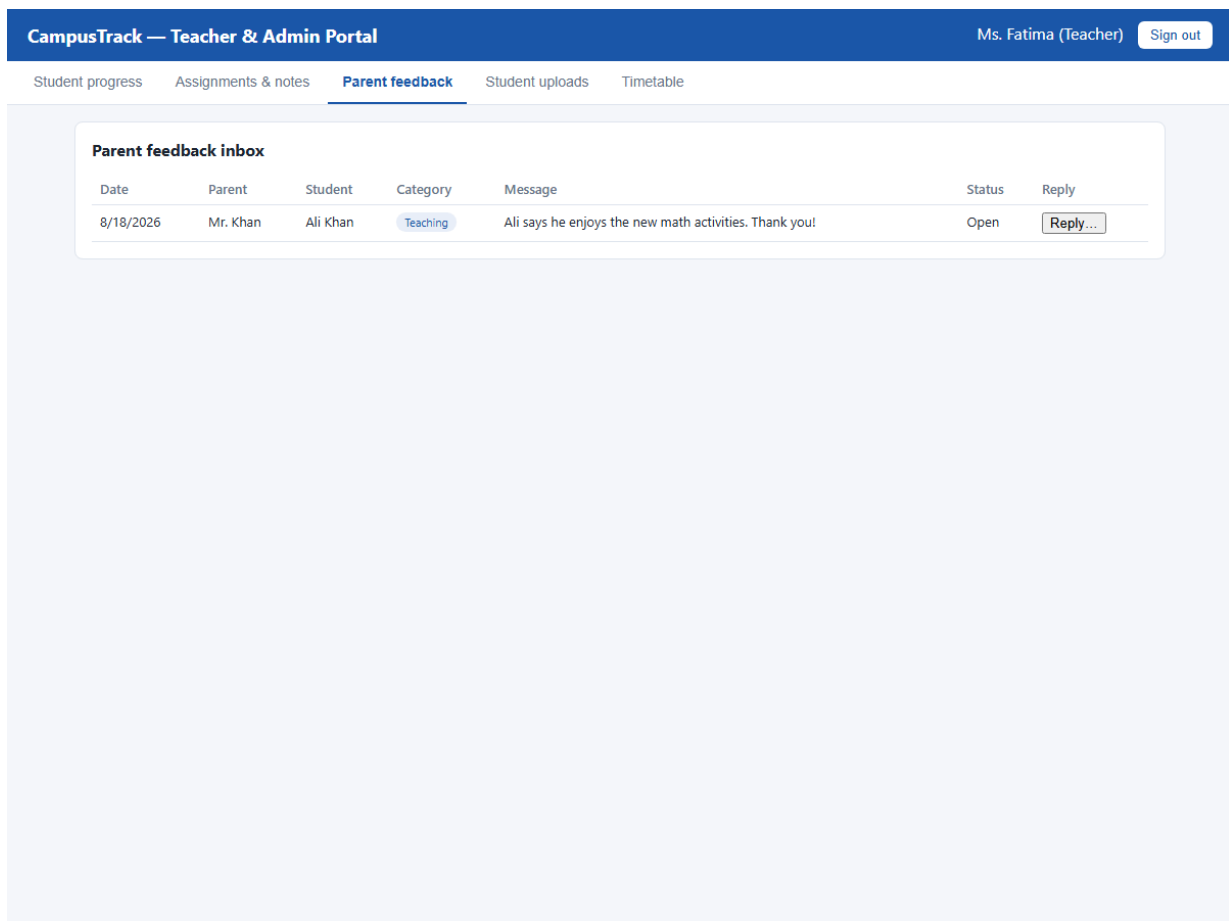

Figure 5.3: Parent feedback inbox with a message from Mr. Khan in the Teaching category.

5.4 Student uploads – review submitted work

When students upload projects, activities or theses from their app, they appear here until reviewed.

1. Click the file name to open and read the work.
2. Click **Approve** or **Reject**.
3. Optionally type remarks – the student sees them under the upload in their app.

5.5 Timetable – view and add entries

Teachers can view any section’s full timetable and add entries for their own subjects (day, start and end time, subject, teacher, room). The timetable students and parents see in their apps updates instantly.

Tip: Everything a teacher saves – reports, replies, assignments – reaches parents and students *immediately*. There is no separate “publish” step.

Chapter 6

Admin Portal (web)

Administrators sign in to the same web portal as teachers, but see one extra tab: **Administration**. An admin can do everything a teacher can, plus manage the school's structure and accounts.

6.1 Classes & sections (fully modular)

The school's structure is never fixed. At any time you can:

- **Add a class:** type the name ("Grade 8", "BSCS-1") and click **Add class**.
- **Add a section:** choose the class, type the section name ("A", "B", "Blue") and click **Add section**.
- **Delete a class or section:** click **delete** next to it. Deletion is "soft" – old attendance and reports are kept for the record, the class simply disappears from all lists.

6.2 Rooms & RFID readers

Register every physical location and the reader hardware on its door:

1. **Add the room:** name it and pick its type – Gate, Classroom, Laboratory, Library, DiscussionRoom, Auditorium or Other.
2. **Add its reader:** type the reader code printed on the device (e.g. GATE-01), pick the room, and choose the number of antennas: **3 for gates, 2 for rooms**.

From that moment the system understands the door: antenna order $1 \rightarrow 2(\rightarrow 3)$ means entry, the reverse means exit.

6.3 Creating accounts

Nobody registers themselves – the admin creates every account. In **Create accounts**:

6.3.1 Create a parent

Choose account type **Parent**, fill full name, username, password and phone, click **Create account**. Hand the username and password to the parent.

6.3.2 Create a teacher

Same steps with account type **Teacher**.

6.3.3 Create a student (and link everything together)

Choose account type **Student**. Extra fields appear:

- **Reg. no** – the student’s registration number;
- **RFID tag EPC** – the code of the RFID chip inside the student’s ID card (your card printer or a handheld reader shows this code). This is what makes automatic attendance work;
- **Section** – which class and section the student joins;
- **Parent** – pick the parent account created earlier. This link is what routes gate alerts and summaries to the right parent’s phone.

Note: If a student’s ID card is lost, issue a new card and simply update the RFID tag EPC on the student – history stays intact.

6.4 Semesters and the timetable

Create a semester (name, start and end date, “current” flag), then build each section’s timetable in the **Timetable** tab: day, start/end time, subject, teacher, room – entry by entry. Parents and students see changes in their apps immediately.

CampusTrack — Teacher & Admin Portal System Administrator (Admin) Sign out

Mon	08:00–09:00	Mathematics	Ms. Fatima	Room 101

Figure 6.2: Building a section timetable as admin.

6.5 Daily & weekly summary times

By default parents receive the daily summary at **18:00** and the weekly summary on **Friday**. Your IT person can change both in the server settings (`Summaries:DailyTime`, `Summaries:WeeklyDay`).

6.6 Checklist: setting up a new school

1. Create the semester.
2. Add classes and their sections.
3. Add rooms, then the RFID reader of each room (3 antennas at gates, 2 elsewhere).
4. Create teacher accounts.
5. Create parent accounts.
6. Create student accounts – linking each student to a section, a parent, and the RFID EPC of their ID card.
7. Build the timetable for every section.
8. Ask parents and students to install the app and sign in.

Tip: The default administrator login shipped with the system is `admin` / `Admin@123` – change this password on day one.

Chapter 7

Frequently asked questions

For parents

I did not get a notification when my child reached school.

Check that notifications are allowed for the CampusTrack app in your phone settings, and that you have internet. The event is never lost – open the app’s **Attendance** tab to see it, and the daily summary will include it.

The app shows “Absent” but my child went to school.

The child may have entered without the ID card, or the card may be damaged. Ask the school office to test the card.

I have two children in the school. Do I need two accounts?

No. One parent account can be linked to any number of children – use the selector at the top of the app to switch.

Can I choose in which language or at what time I get the daily summary?

The summary time is set by the school (usually 6:00 pm). Ask the school office if a different time suits parents better.

For students

I scanned the QR code but nothing downloaded.

Make sure you are connected to the internet and that the code is a CampusTrack assignment code. Ask the teacher to re-print or re-project the code if it is blurred.

I uploaded the wrong file.

Upload the correct file with the same title – the teacher will see both and review the newest one.

Does the school see where I am all the time?

No. The card is only noticed when you pass a door with antennas – the gate and room doors of the school. It records nothing anywhere else.

For teachers

Do parents really see my report immediately?

Yes – the moment you click *Save & notify parent*, a notification goes to the parent’s phone, and the report stays visible in their app.

Which sections appear in my lists?

The sections you teach according to the timetable. If a section is missing, ask the admin to add your timetable entries.

For administrators

A reader stopped sending events.

Check its power and network. All raw card reads are stored on the server, so once the reader is back, attendance continues normally.

Can we add a new building next year?

Yes – everything is modular. Add the new rooms and readers in the Administration tab; no software change is needed.

Is the students' data safe?

Data lives in the school's own Microsoft SQL Server database. Every user sees only what their role allows: parents only their own children, students only themselves.
